

F.W. WEBB COMPANY

Owner: F.W. Webb Company

Scope of Work: HVAC Design

Location: Various Locations

Since 2006, Turner Building Science & Design has been involved with 19 different F.W. Webb projects. These projects have included HVAC and fire protection designs for new buildings and some existing warehouses.

The design for F.W. Webb in Hyannis, MA included an open loop well design with local geotechnical considerations. Thermal solar panels combined with thermal storage supplement geothermal system as well as satisfying domestic hot water demand.

F.W. Webb in Bennington, VT included warehouse areas heated with indirect fired, direct power vent gas unit heaters with an AFUE efficiency rating of 80%.

An added benefit for F.W. Webb is the opportunity to showcase the equipment they sell for geothermal and solar heating and cooling systems. The Waterford, CT project will include a training room for demonstrating F.W. Webb products, and an area in the warehouse near the training room will afford an open view of the operational geothermal system.
